

## One Team Neighbourhood Profile Miles Platting & Newton Heath, Moston and City Centre Locality Updated September 2016

### Background

Developing a better understanding of 'place' is a key part of the design work underpinning the implementation of the One Team and place-based care approach to the integration of health and social care in Manchester over the period up to 2020. This short report is one of a series of profiles for each of the 12 localities in the city. As a starting point, it draws upon the data that is readily available within Public Health England's Local Health tool but with the expectation that this could be expanded upon as the commissioning specification for place based care is developed further.

### About the data

This profile has been generated using the functionality of Public Health England's Local Health tool. This tool contains quality assured data that can be used to compare any area (or combination of areas) with the local authority and England averages for a range of indicators. The tool also allows users to automatically generate a detailed, pre-formatted, profile of a selected area. The data in the tool was updated in September 2016 and this profile draws on that updated dataset.

This profile should be viewed alongside the more detailed data that has been collated within the [Compendium of Statistics](#) ("A Picture of Progress") for each CCG in Manchester and also that which is available through the Council's [Intelligence Hub](#). Both of these are available on the Manchester City Council website.

### Key features of the locality

The population living in the locality is characterised by:

- A *higher* than average proportions of people aged 16-24 years
- A lower than average proportion of people aged 0-16 years and 65 and over
- A *higher* than average proportion of people whose ethnicity is not 'White UK' and who cannot speak English well or at all

Compared with England as a whole, the locality has a *significantly worse*:

- Rate of GCSE achievement (% achieving 5 or more GCSEs at grades A\*- C incl. Eng & Maths)
- Unemployment rates (JSA claimants)
- Proportion of people with 'bad' or 'very bad' general health (2011 Census)
- Proportion of households with central heating (2011 Census)
- Proportion of people living in overcrowded households (2011 Census)
- Proportion of pensioners living alone (2011 Census)
- Proportion of obese children and children with excess weight in reception year and year 6
- Rate of emergency hospital admissions in 0-4 year olds
- Rate of A&E attendances in 0-4 year olds
- Rate of hospital admissions for injuries in 0-4 year olds; 0-15 year olds
- Proportion of binge drinking adults
- Rate of emergency hospital admissions for all causes; coronary heart disease; stroke; COPD
- Incidence of all cancer; lung cancer
- Rate of hospital stays for alcohol related harm
- Rate of emergency admissions for hip fracture aged 65+

- Mortality rate (all ages) for all causes; all cancer; all circulatory disease; coronary heart disease; stroke; respiratory disease
- Premature mortality rate (under 75) for all causes; all cancer; all circulatory disease; coronary heart disease

Compared with England as a whole, the locality has a *significantly better*:

- Proportion of low birth weight births
- Proportion of people with a limiting long term illness or disability (2011 Census)
- Proportion of people providing 1 hour or more and 50 hours or more unpaid care per week (2011 Census)
- Rate of admissions for injury in 15-24 year olds
- Rate of hospital stays for self-harm
- Rate of elective hospital admissions for hip replacement

### Issues to consider

- 1 The profile contains data for the locality as a whole. In practice, there will be differences between the wards and LSOAs within the locality and, as such, some parts of the locality will have higher or lower health needs (and generate a higher or lower demand on health and social care service) than the locality as a whole.
- 2 The data in the Local Health tool is based on the resident population of an area. CCG's responsibilities extend beyond this to cover patients registered with GP practices within their areas. Some of these patients may live outside of the locality and/or the city as a whole. Similarly, some of the people living within an area may be registered with a GP practice outside of it (or not registered with a GP practice at all).
- 3 The profile has been generated by combining the data for individual wards. Wards are an electoral geography which are designed by the Boundary Commission in order to ensure that local people have equal access to a locally elected representative. As such, they may not reflect the true boundaries of communities as they are understood on the ground.
- 4 Ward level data in Local Health has been estimated from MSOA data, population weighted using the mid-year population of the Output Areas that make up each ward. As such, the figures generated by the tool are a close approximation of the 'real' data for that ward rather than an exact match.
