

## Stretford Road/Chorlton Road CYCLOPS junction

### What these changes will mean

- CYCLOPS - Cycle Optimised Protected Signals
- Junction designed to protect cyclists from general traffic
- Cyclists approach the junction from four 'arms' that converge into a roundabout cycle track
- Bicycles can make a right turn from the junction protected from traffic
- The turn can be made in one movement, dependent upon signal timings
- All cycle and traffic conflicts are signal controlled
- Controlled pedestrian phases are shorter
- Cyclist and pedestrian movements can run at the same time
- The CYCLOPS junction maximises the opportunity for safe cycling and walking, while making the performance of the junction more efficient for all users and transport types.
